Problem (public)

Why does my ODBC Database connection fails
Multiple ODBC Database Errors

Solution (public)

you have to install the Microsoft Access Database Engine 2010 Redistributable 32bit.

You can find it here: [1]Download Microsoft Access Database Engine 2010 Redistributable from Official Microsoft Download Center

if you have installed already a office 64bit on your system you should install it as passive.

To do this you should open the windows command (CMD) as administrator and start the downloaded file with /passive.

Example: C:\PATHTOFOLDER\AccessDatabaseEngine.exe /passive

Before the MES4 is working, the file setupDB.exe in the MES4 folder should be started to create the database connection.
