LVDAC-EMS Release 3.22 - EMS DACI 9063 8960

Problem (public)

The customer needs LVDAC for DACI (9063), and a Dynamometer (8960).

Solution (public)

The new release of LVDAC-EMS (3.22) is now available for [1]download with a
series of new improvements, such as:

- New synchroscope functions to measure active and reactive power as well as
controlling a synchro-check relay;
- Complete revision of the Wind Turbine with PMSG function;
- 3 new functions to control the PMSM 2kW;
- Three-Phase Grid-Tied Solar Inverter new function for the Micro Grid
developments;
- Engine Emulator new function for our new Diesel Generators course.

Known Issue:

Due to a bug in the setup file, you must manually uninstall the previous
version of LVDAC-EMS from your computer before proceeding with the
installation of the new LVDAC-EMS v3.22.00 in order to have no issue with the
functions in the BLDC Motor/PMSM Control window.
